# SOIL SOLUTIONS™

Mat, Inc. the manufacturer of quality erosion control products for almost twenty years is proud to announce the Soil Solutions line of consumer products for the hydraulic seeding industry. Our family of products are designed to satisfy the requirements from the most difficult mountain slope to an easy home lawn. Below is a brief description of our new line of add-on products. Use this product information guide to help you select the add-on products that are the right soil solutions for your next project.

Mat-CD-SS is a highly concentrated green liquid spray dye. It can be used in any hydroseeder with any of your favorite mulches or seed mixes. Our coverage dye is nontoxic, non-staining and completely water soluble. It mixes and dissipates quickly. Use this Mat Soil Solution when a rich deep green is desired to enhance all your hydroseeding operations.

Mat-ML-SS is lime in a granulated pellet or micronized form designed to be added to hydro mulch slurries. It can also be added to dry mulch mixes. Use this Mat Soil Solution for fast and improved vegetative ground establishment during the preparation stage on your next project.

Mat-AA-SS is a uniquely manufactured liquid catalyst which hastens the neutralization of excessive minerals and salts. It can be mixed directly in the slurry with any seed and other mix components. Use this Mat Soil Solution for fast and improved vegetative ground cover in environments with high alkaline pH water or soils.

Mat-SF-SS is an engineered polyester fiber that is crimped and cut into .75 inch lengths. It mixes completely creating a slurry that can be applied in both wet or dry weather conditions. When added to your tank, it binds and strengthens your mulch slurry. Use this Mat Soil Solution for increased tack and staying power in any weather.

Mat-HT-SS is a proprietary emulsion formulation of water treatment for high volume aqua-based applications. It can be mixed directly with any mulch-seed mix. Use this Mat Soil Solution for general hydroseeding enhancements including improved mixing, water retention, coverage or in higher concentrations as a high performance liquid tackifier.

Mat-ST-SS is a new tackifying formulation that provides easy mixing without lumping while yielding the fastest viscosity Vs. time available. Fast viscosity buildup and concentrated bonding assures that the network of fiber, adhesive and seed will bond into a soil holding matrix anchoring the mulch and preventing soil erosion. Use this Mat Soil Solution when you need a high performance powdered tackifier.
